**V11157 "HD HRS TRAVEL TO WORK 84"**

**NUM(3.0)**

Head's Annual Hours of Travel to Work in 1984

*The values for this variable in the range 001-998 represent annualized hours spent traveling to work. These hours are calculated by multiplying the travel time in hours times the number of trips per week times the number of weeks worked in 1984. Trips per week are assigned on the basis of hours worked per week on the main job (V11706) according to the paragraph below. Note that for a Head who did not work in 1984 but is now working, this variable equals zero. All missing data were assigned.*

*If hours worked per week were less than 10, either 2 or 4 trips per week were assumed, whichever seemed more reasonable. If less than 20 hours per week were worked, 6 trips per week were used. Under 35 hours worked meant 8 trips assumed; less than 48 indicated 10 trips, and for 48 or more hours, 12 trips.*

**NUM(3.0)**

Wife's/"Wife's" Annual Hours of Travel to Work in 1984

The values for this variable in the range 001-998 represent annualized hours spent traveling to work. These hours are calculated by multiplying the travel time in hours times the number of trips per week times the number of weeks worked in 1984. Trips per week are assigned on the basis of hours worked per week on the main job (V12069) according to the table below. Note that for a Wife/"Wife" who did not work in 1984 but is now working, this variable equals zero. All missing data were assigned.

If hours worked per week were less than 10, either 2 or 4 trips per week were assumed, whichever seemed more reasonable. If less than 20 hours per week were worked, 6 trips per week were used. Under 35 hours worked meant 8 trips assumed; less than 48 indicated 10 trips, and for 48 or more hours, 12 trips.

## V11395 "LABOR PART FARM Y 84"

NUM(5.0)

1985 Head's Labor Part of Farm Income in 1984 (Question F5)

The values for this variable in the range 00001-99998 represent the labor portion of Head's farm income reported at F5 in whole dollars; all missing data were assigned. The asset portion of the farm income is located at V11406.

Labor and asset splits of farm and business income were made using the 1984 work hours on jobs which generated those incomes. The rules are as follows:

- 1) if work hours are greater than or equal to the (positive) dollar amount, then all income is assumed to be labor.
- 2) if work hours are less than the dollar amount, assume that labor is worth at least \$1.00 per hour and that all income above that amount is split equally between labor and asset.  

$$\text{Labor Portion} = \text{Total farm or business income} / 2 + \text{work hours} / 2$$

$$\text{Asset Portion} = \text{Total farm or business income} / 2 - \text{work hours} / 2$$
- 3) if total farm or business income represents a loss (i.e., a negative number), then the labor portion equals 0 and the loss is coded in the asset portion.

*In a few cases, a value of zero is given at V12197 for the Wife (not "Wife"). Because these questions were asked separately of Heads and Wives/"Wives", their separate reports occasionally did not agree. If the Head reported that he was married to Wife, then we treated her as Wife at the individual level and for all checkpoints throughout the interview. The opposite situation, where the Head said he was not married to the "Wife", also occurred. The user must be aware that the data in V12197 and V12203-V12206 may not include a marriage to the Head or Wife, or conversely may include a marriage to the Head reported by a "Wife".*

 \$6.30 for females age 36-55  
 \$6.30 for males age 56 and older  
 \$5.40 for females age 56 and older

*This same standard has been used in previous waves. (Since the table is from a 1967 publication, values are in 1967 dollars.) Adjustments for inflation, etc., are left to users.*

**V12374 "ANNUAL NEEDS STD-1984"**

**NUM(5.0)**

Annual Need Standard in 1983

*This is the Orshansky-type poverty threshold based on an annual food needs standard which is derived from the weekly food costs in the preceding variable, converted to an annual amount, and adjusted for economies of scale by USDA rules as follows:*

*Single person . . . . .add 20%*

*Two persons . . . . .add 10%*

*Three persons . . . . .add 5%*

*Four persons . . . . .no change*

*Five persons . . . . .deduct 5%*

*Six or more persons . . . . .deduct 10%*

*An additional adjustment for diseconomies of small households (in rent, etc.) was made as follows:*

*4.89 times the food needs for single persons*

*3.70 times the food needs for two-person units*

*3.00 times the food needs for all other units*

*Please refer to the Wave VII (1974) Documentation volume, pp. 39-41, and to the User Guide for further details on the need standard. Note that this variable is not adjusted for inflation (it makes use of the previous variable, which is in 1967 dollars), nor is it exactly comparable to the official poverty standard; such changes are left to users. This need standard is adjusted for changes in family composition during 1984 and is not adjusted for farmers; see V12375 for an income/needs measure which makes such an adjustment.*

*The formula used in generating this variable is as follows:*

*Total 1984 Family Money Income (V12371)/1984 Family Needs (V12374).*

*This ratio is multiplied by 1.25 for farmers (those coded 801 in V11651 or 80 in V11710 and V11714) to adjust for lower food costs. This is the only measure of income to needs on this tape which makes this adjustment for farmers. For a full description on the needs standard used, please refer to the wave VII (1974) documentation volume, pp. 39-41. Note that this need standard has not been adjusted for inflation (it makes use of the table in V12373, which is in 1967 dollars).*

**V12394 "HU VALUE/ROOM - 1985"**

**NUM(5.0)**

Value Per Room of 1985 Housing Unit

The values for this variable represent the actual value per room, calculated according to the following formula:

$$V11125 + [(V11133 + V11135) \times 10] / V11614$$

(1985 House Value)      (1985 Rent Paid)      (1985 Value of Rent Received)      (Number of Rooms in 1985)

The following rules were used for each case, depending on the value of V11618:

Homeowners (V11618=1): House value (V11125) divided by the number of rooms (V11614)

Renters (V11618=5): Dwelling value, assumed to be 10 times the annual rent (V11133), divided by the number of rooms (V11618)

Those neither owning nor renting (V11618=8): Dwelling value, assumed to be 10 times the value of rent received free in return for services (V11135), divided by the number of rooms (V11614)

Note that V11614 is a two-digit variable, so data values in this variable are actual. This is a change from all previous waves.

*This variable, which for most cases is identical to the first two digits of 1980 V7449, 1981 V8101, and 1982 V8725, (and identical in all cases to 1983 V9410 and 1984 V11057), was constructed to allow users to calculate proper standard errors for regression coefficients. Families originating from 1968 families were reassigned stratum values in 1983. Splitoffs receive the stratum values assigned to the families in which they were residing in 1968. See Section I, Part 5 of the wave XVI documentation volume for a more detailed discussion of this variable.*

**NUM(2.0)**

Paired Selection Stratum Code

*This variable is provided to identify strata necessary in computing proper variances of means and totals using such algorithms as PSALMS in OSIRIS.IV, SESUDAAN in SAS, or CLUSTERS in the World Fertility Surveys. Codes 01-53 identify strata for the self-representing portion of the sample, while code 54 identifies cases from all nonselfrepresenting areas. This variable should be used in conjunction with V12421. See Section I, Part 5 of the wave XVI documentation volume for a more detailed explanation of this variable.*

**V12421 "PSALMS SECU"**

**NUM(3.0)**

Paired Selection Sample Error Computation Unit Code

*This variable identifies clusters necessary for computing sampling errors for means and totals. For the self-representing portion of the sample (V12420=1-53), V12421 identifies matched pairs of clusters for using in a paired difference model. For the nonself-representing portion (V12420=54), V12421 identifies to which of 115 clusters the case belongs. These 115 clusters are arranged in order of similarity in such a manner as to allow the application of a "successive difference" model in estimating variances of means and totals. This variable should be used in conjunction with V12420.*

Year in Which 1985 Head Most Recently Became New Head

*This variable contains the last two digits of the year of data collection in which background information in V11907-V11923 was most recently gathered for the 1985 Head. If a Head splits off from the main family, e.g., through divorce, background information is re-asked. However, for 1985 most background information was asked of all 1985 Heads (V11924-V11981); variables 11907-11923 were not re-asked because most data items in that series should remain constant.*

## V12443 "HOUSEHOLD ID #"

NUM(4.0)

Household ID Number

This variable was generated to simplify the clustering of multiple panel family units residing in the same households. Its values were assigned simply by selecting one 1985 ID number (V11102), the lowest value, from among the 1985 ID numbers (V11102) of those families comprising each such household group. This value was used in these tape locations for all of the related households. Thus, if the user sorts the data on this variable, the family units within larger household groups will be adjacent to each other. Family units who did not share their households with other panel families were given their own values for V11102. Thus, the range of values is 0001-7032, but the series is not contiguous.

## V12444 "FU PRIMACY WITHIN HU"

NUM(1.0)

FU Primacy within Household

*In most household groups with two or more panel families, one of those families is primary and contains as its Head or Wife/"Wife" the householder. However, in a few cases, the family units equally share the household: they co-own or co-rent. For these households we have designated one of the families in a group as primary and assigned a value for secondaries to the other(s). The rules for primacy selection are as follows:*

- 1) *the panel family whose Head is closest to age 45, or*
- 2) *if all Heads are age 45, then the Head with the greatest income.*

Count	%	Value/Range	Code Value/Range Text

Since 1979 it was updated annually for marriages, divorces, etc. but not for nonresponse. It is included here so that users may make comparisons with the newly revised weights. See V12446 and the 1984 documentation volume as cited below.*

*Weights were completely revised in 1984 to account for deaths, marriages to nonsample persons, and differential nonresponse since 1968. See Section I, Part 5, pp. 66-75 of the 1984 documentation volume for further information. This 1985 weight variable has been updated for marriages, divorces, etc. since 1984.*

V12447 "CENSUS NEEDS STANDARD-1984"

NUM(5.0)

Annual Needs Standard for the 1984 Family--CENSUS VERSION

*This poverty threshold was taken from Census Bureau's website, <http://www.census.gov/hhes/www/poverty/threshld/index.html>. We have used the table entitled 'Poverty thresholds by Size of Family and Number of Children'*

*The threshold values are based on family size, the number of persons in the family under age 18, and the age of the householder. Due to some of the limitations of our extant files, we were unable to generate the number of months for those individuals who moved out of multiple families in the same wave. Otherwise the calculation of needs is similar to that described in Section I, Part 5, of guide to the 1993 PSID data, 93GUIDE.PDF.*
