### V10224 "WEEKLY FOOD NEEDS-1984"

NUM(5.2)

Weekly Food Needs

This variable's values are based on USDA Low-Cost Plan estimates of weekly food costs, according to the table below (reproduced from Family Economics Review, June 1967), summed for the family as it was at the time of the interview.

### INDIVIDUAL FOOD STANDARD (LOW COST)

- \$3.90 for both males and females under age 4
- \$4.60 for both males and females age 4-6
- \$5.50 for both males and females age 7-9
- \$6.40 for males age 10-12
- \$6.30 for females age 10-12
- \$7.40 for males age 13-15
- \$6.90 for females age 13-15
- \$8.70 for males age 16-20
- \$7.20 for females age 16-20
- \$7.50 for males age 21-35
- \$6.50 for females age 21-35
- \$6.90 for males age 36-55
- \$6.30 for females age 36-55
- \$6.30 for males age 56 and older
- \$5.40 for females age 56 and older

This same standard has been used in previous waves. (Since the table is from a 1967 publication, values are in 1967 dollars.) Adjustments for inflation, etc., are left to users.

The actual weekly food needs in dollars and cents are coded here.

Note that this variable is defined as having two decimal places.

#### V10225 "ANNUAL NEEDS STD-1983"

NUM(5.0)

Annual Need Standard in 1983

This is the Orshansky-type poverty threshold based on an annual food needs standard which is derived from the weekly food costs in the preceding variable, converted to an annual amount, and adjusted for economies of scale by USDA rules as follows:

Six or more persons . . . . . deduct 10%

An additional adjustment for diseconomies of small households (in rent, etc.) was made as follows:

- 4.89 times the food needs for single persons
- 3.70 times the food needs for two-person units
- 3.00 times the food needs for all other units

Please refer to the Wave VII (1974) Documentation volume, pp. 39-41, and to the User Guide, Chapter D for further details on the need standard. Note that this variable is not adjusted for inflation (it makes use of the previous variable, which is in 1967 dollars), nor is it exactly comparable to the official poverty standard; such changes are left to users. This need standard is adjusted for changes in family composition during 1983 and is not adjusted for farmers; see V11024 for an income/needs measure which makes such an adjustment.

## V10254 "LABOR PART FARM Y 1983"

NUM(5.0)

1984 Head's Labor Part of Farm Income in 1983 (Question K4)

Labor and asset splits of farm and business income were made using the 1983 work hours on jobs which generated those incomes. The rules are as follows:

- 1) if work hours are greater than or equal to the (positive) dollar amount, then all income is assumed to be labor.
- 2) if work hours are less than the dollar amount, assume that labor is worth at least \$1.00 per hour and that all income above that amount is split equally between labor and asset.

Labor Portion=Total farm or business income/2 + work hours/2 Asset Portion=Total farm or business income/2 - work hours/2

3) if total farm or business income represents a loss (i.e., a negative number), then the labor portion equals 0 and the loss is coded in the asset portion.

The values for this variable in the range 00001-99998 represent the labor portion of Head's farm income reported at K4 in whole dollars; all missing data were assigned. The asset portion of farm income is located at V10265.

#### V10260 "LABOR PART MKT GARDEN-83"

NUM(5.0)

1984 Head's Labor Portion of Income from Farming or Market Gardening in 1983 (Questions K16-17:b)

Labor and asset splits of farming and market gardening were made using the 1983 work hours from the job that generated that income. The rule for these splits assumes 75% of the dollar amount is labor income, and the remaining 25% is asset income. If a loss is reported, then the labor portion equals zero and the loss is coded in the asset portion.

The values for this variable in the range 00001-99998 represent the labor portion of the farming and market gardening income reported at K16-17:b in whole dollars; all missing data were assigned. The asset portion of this income is located at V10267.

If there were missing data among codes 1, 2 and 3 (that is, no gap occurred between employment spells), V10533-V10548 were coded if the questions were answered. The same rule was followed for those who experienced a gap (codes 4, 5 and 7). If it was unclear whether or not a gap had occurred, however, then V10533-V10548 were coded zero.

NUM(3.0)

C136. About how much time does it take you to get to work each day, door to door? The values for this variable in the range 001-998 represent annualized hours spent traveling to work. These hours are calculated by multiplying the travel time in hours times the number of trips per week times the number of weeks worked in 1983. Trips per week are assigned on the basis of hours worked per week on the main job (V10562) according to the table below. Note that for a Head who did not work in 1983 but is now working, this variable equals zero. All missing data were assigned.

If hours worked per week were less than 10, either 2 or 4 trips per week were assumed, whichever seemed more reasonable.

If less than 20 hours per week were worked, 6 trips per week were used.

Under 35 hours worked meant 8 trips assumed;

less than 48 indicated 10 trips,

and for 48 or more hours, 12 trips.

NUM(3.0)

D54. On your last job, how much time did it take you to get to work each day, door to door?

The values for this variable in the range 001-998 represent annualized hours spent traveling to work. These hours are calculated by multiplying the travel time in hours times the number of trips per week times the number of weeks worked in 1983. Trips per week are assigned on the basis of hours worked per week on the main job (V10630) according to the table below. Note that for a Head who did not work in 1983, this variable equals zero. All missing data were assigned.

If hours worked per week were less than 10, either 2 or 4 trips per week were assumed, whichever seemed more reasonable.

If less than 20 hours per week were worked, 6 trips per week were used.

Under 35 hours worked meant 8 trips assumed;

less than 48 indicated 10 trips,

and for 48 or more hours, 12 trips.

If there were missing data among codes 1, 2 and 3 (that is, no gap occurred between employment spells), V10747-V10762 were coded if the questions were answered. The same rule was followed for those who experienced a gap (codes 4, 5 and 7). If it was unclear whether or not a gap had occurred, however, then V10747-V10762 were coded zero.

NUM(3.0)

F125. About how much time does it take your (Wife/friend) to get to work (at her present job) each day, door to door?

The values for this variable in the range 001-998 represent annualized hours spent traveling to work. These hours are calculated by multiplying the travel time in hours times the number of trips per week times the number of weeks worked in 1983.

Trips per week are assigned on the basis of hours worked per week on the main job (V10776) according to the table below. Note that for a Wife/"Wife" who did not work in 1983 but is now working, this variable equals zero. All missing data were assigned.

If hours worked per week were less than 10, either 2 or 4 trips per week were assumed, whichever seemed more reasonable.

If less than 20 hours per week were worked, 6 trips per week were used.

Under 35 hours worked meant 8 trips assumed;

less than 48 indicated 10 trips,

and for 48 or more hours, 12 trips.

## V10843 "G51 TRAVEL TO WORK(W-U)"

NUM(3.0)

G51. On her last job, how much time did it take her to get to work each day, door to door?

The values for this variable in the range 001-998 represent annualized hours spent traveling to work. These hours are calculated by multiplying the travel time in hours times the number of trips per week times the number of weeks worked in 1983. Trips per week are assigned on the basis of hours worked per week on the main job (V10830) according to the table below. Note that for a Wife/"Wife" who did not work in 1983, this variable equals zero. All missing data were assigned.

If hours worked per week were less than 10, either 2 or 4 trips per week were assumed, whichever seemed more reasonable.

If less than 20 hours per week were worked, 6 trips per week were used.

Under 35 hours worked meant 8 trips assumed;

less than 48 indicated 10 trips, and for 48 or more hours, 12 trips.

### V11005 "M38-39 RELIGIOUS PREF-HD"

NTIM(1.0)

M38. Is your religious preference Protestant, Catholic, or Jewish, or what? M39. What denomination is that?

This question was asked of all Heads in 1970, and for the 1971 through 1977 interviews was asked of all new Heads. Values were brought forward from previous data each year for families with the same Heads. In 1978, however, the question was not asked. In 1979, when this question was reinserted into the questionnaire, values were not brought forward from 1977 for families with unchanged Heads since that time. Therefore, any cases with the same Head since 1978 must by necessity contain missing data (i.e., a value of zero). For those cases with the same Heads from 1977 through the present, please use 1977 religious preference, V5617.

NUM(1.0)

Race of 1984 Family

Since in 1984 most interviews were taken by telephone, this variable was copied from 1972 data; splitoffs' races were assumed to be the same as those of their main families.

This variable is identical for each case to V2969, a 1972 variable which randomly divided the sample into four equal parts. Splitoffs since 1972 have received the same code value as their main families.

### V11057 "BRR STRATUM"

NUM(2.0)

Balanced Half-Sample (BHS) Stratum Code

This variable, which for most cases is identical to the first two digits of 1980 V7449, 1981 V8101, and 1982 V9725, was constructed to allow users to calculate proper standard errors for regression coefficients. Families originating from 1968 families were reassigned stratum values in 1983. Splitoffs receive the stratum values assigned to the families in which they were residing in 1968. See Section I, Part 5 of the wave XVI documentation volume for a more detailed discussion of this variable.

# V11058 "BRR SECU"

NUM(1.0)

Balanced Half-Sample Sample Error Computation Unit (BHSECU) Code

This variable, which is identical to the third digit of earlier SECU codes, identifies paired clusters necessary for computing sampling errors of regression coefficients by the method of Balanced Half-sample Replications. This variable should be used in conjunction with V11057.

#### V11059 "PSALMS STRATUM"

NUM(2.0)

Paired Selection Stratum Code

This variable is provided to identify strata necessary in computing proper variances of means and totals using such algorithms as PSALMS in OSIRIS.IV, SESUDAAN in SAS, or CLUSTERS in the World Fertility Surveys. Codes 01-53 identify strata for the self-representing portion of the sample, while code 54 identifies cases from all nonselfrepresenting areas. This variable should be used in conjunction with V11060. See Section I, Part 5 of the wave XVI documentation volume for a more detailed explanation of this variable.

_	Count	%	Value/Range	Code Value/Range Text
	2,827	40.86	1 - 53	Strata for self-representing portion
	4,091	59.14	54	Non-self-representing portion

#### V11060 "PSALMS SECU"

NUM(3.0)

Paired Selection Sample Error Computation Unit Code

This variable identifies clusters necessary for computing sampling errors for means and totals. For the self-representing portion of the sample (V11059=1-53), V11060 identifies matched pairs of clusters for using in a paired difference model. For the nonself-representing portion (V11059=54), V11060 identifies to which of 115 clusters the case belongs. These 115 clusters are arranged in order of similarity in such a manner as to allow the application of a "successive difference" model in estimating variances of means and totals. This variable should be used in conjunction with V11059.

NOTE: The values for V11061-V11063 are obtained from questionnaires sent to state employment offices. See Section I, Part 5 of this volume for further details.

This variable contains the last two digits of the year of data collection in which background information in V10967-V11005 was most recently gathered for the 1984 Head. If a Head splits off from the main family, e.g., through divorce, background information is re-asked. Annual Needs Standard for the 1983 Family--CENSUS VERSION

This poverty threshold was taken from Census Bureau's website, http://www.census.gov/hhes/www/poverty/threshld/index.html. We have used the table entitled 'Poverty thresholds by Size of Family and Number of Children'

The threshold values are based on family size, the number of persons in the family under age 18, and the age of the householder. Due to some of the limitations of our extant files, we were unable to generate the number of months for those individuals who moved out of multiple families in the same wave. Otherwise the calculation of needs is similar to that described in Section I, Part 5, of guide to the 1993 PSID data, 93GUIDE.PDF.
